

# Antidoto

## *A Ribera Star is Back in the Saddle*

Over the past quarter century, Ribera del Duero has become arguably the most successful wine region of Spain. Yet, some of its finest wines are yet to be made.

The reason is simple: many of the best *terroirs* and oldest vines are in the remote eastern part of the region—the province of Soría—which is still largely unexplored by today’s winemakers.

In fact, if it weren’t for a young French winemaker, Bertrand Sourdais, Soría might still be unknown. Bertrand first brought Soría to light with his pioneering wines at Atauta, a village within the province. But when Atauta was sold in 2009 during Spain’s economic downturn, his gaze shifted to his family’s Chinon estate in France’s Loire Valley.

### Birth of a New Wine

Yet the pull of Soría remained strong and he soon returned to the region to make a new wine which—like all of his work at Atauta—would be full of the soul of ancient-vine Tinto Fino.

And so, **Antidoto** was born. As at Atauta, his goal is to capture the essence of this singular region. And he will do so by sourcing from the best vineyard sites—many of which date from the time before Phylloxera—and by ultimately managing the viticulture himself. Wherever possible, he will employ organic and, when possible, biodynamic methods.

As for Antidoto’s intriguing name—Spanish for “antidote”—it has a particular meaning for Bertrand in the wake of Atauta’s sale. But the wine

also serves as an antidote to the many Ribera de Duero wines that substitute heavy-handed winemaking for a sense of place and variety. And at a relatively modest price point, it is surely an antidote to high wine prices in the appellation.

### The Rooftop of Ribera

Bertrand poetically describes the Soría zone as “sitting on the rooftop of Ribera,” where temperatures are cooler than in the rest of Ribera del Duero. There are numerous soil types, but most

of them have two things in common: their poverty and an abundance of sand that has kept Phylloxera away for the past 150 years. As a consequence this is one of the largest concentrations of

ungrafted vines in Europe.

To Bertrand’s mind, the Soría sub-zone offers a transitional wine type that can—in the right hands—blend Rioja’s fragrance and finesse with Ribera del Duero’s traditional power and depth. He is using long, gentle macerations to minimize tannin extraction and no new barrels are employed for aging. The immediate goal is a wine with balance, perfume, and complete tannins.

### Ribera’s Great Bargain

With its low price, Antidoto promises to quickly make its mark as *the* bargain among serious Ribera del Duero offerings. And Bertrand’s launching of the wine could not have been better timed, taking advantage of two great vintages in 2009 and 2010.

Antidoto is an extraordinary wine—and extraordinary value—in today’s marketplace.

...this is one of the largest concentrations of ungrafted vines in Europe.
